Задание: выполнить темизацию ранее реализованного сайта. Добавить к текущему варианту сайта дополнительную тему, в итоге должно получиться либо: светлая и тёмная с ориентиром на пользовательские настройки. Либо две кастомные темы с переключателем через JS.

Так как у нас основная тема темная (в черных цветах), мы выполнили темизацию (разделение на светлую и темную темы). Для этого основные цвета и оттенки были откорректированы на противоположные. Результаты готового дизайна представлены ниже.

Are you someone who struggles with balancing your well-being? With all the health and wellness information available it's easy to feel overwhelmed, unsure how to spend your time, energy, and resources to craft a well-balanced wellness practice. The health triangle is a framework and visualization tool to help you understand the three key aspects of overall well-being: physical, mental, and social health. Each of these areas is interconnected and plays an important role in achieving balance.

THERE ARE NO SECRETS TO SUCCESS.
IT IS THE RESULT OF PREPARATION,
HARD WORK & LEARNING FROM FAILURE.

15 MIN SHAPES WORKOUT

How to warm up before a workout

Join us to learn how to do some of the best gym warm-ups for a powerful and productive gym session with pro trainer Corey Ashe.

When learning how to warm up in the gym, don't overexert yourself. The warmup is not where you want to extend all your energy. You should warm up for 5-10 minutes before diving into your workout. The warmup created by Ashe is full-body and dynamic. Dynamic exercises are controlled movements that prep your muscles for peak performance. Ashe explained that dynamic movements are best to do before training or games. These movements mimic the exact movements you will be making in your workout or sport.

Вывод: разделение выполнили успешно. Основная концепция заключается в определении цветовых переменных для фона и текста в корневом элементе и их переопределении в зависимости от выбранной темы. В `light.css` заданы цвета для элементов, которые требуют цветовой корректировки. В результате в любом браузере через средства разработчика можно вживую увидеть смену цветовой темы.
